

CARE INSTRUCTIONS FOR EQUILIBRIUM JEWELLERY

Equilibrium Jewellery is manufactured to conform with internationally acclaimed quality standards. It is Lead Free, Nickel Free and Cadmium Free, and should not cause any toxic or allergic reactions. It can be worn with complete confidence.

Here are a few suggestions in order to keep Equilibrium Jewellery in pristine condition.

1. Jewellery should be removed before bathing, washing hands or swimming.
2. When it is not being worn jewellery should be stored out of light and air, which will tarnish the item eventually as it would solid silver. It is recommended that the box is kept for this purpose or that the item is stored in a pouch.
3. If an item does become tarnished this should come off easily by buffing up with a Silver Polishing Cloth. Silver Dip (which is stocked by most jewellers) may be required for heavier tarnish.
4. Contact with perfume, hair sprays and body lotion should be avoided.
5. Giving jewellery a periodic buff with a silver polishing cloth will ensure that it stays in a pristine condition.
